A bacterial strain, designated FS0-4T, was isolated from soil in China and characterized using a polyphasic taxonomic approach. Cells were Gram-stain-negative, aerobic, non-motile, short rods. Phylogenetic analysis based on 16S rRNA gene sequences showed that strain FS0-4T was most closely related to Lianibacter hongdougensis 6T (96.1 % similarity), Lianibacter aestuarii HG1-1T (96.0 %) and Lianibacter jarvisii 32-T (96.0 %). The major fatty acids were iso-C15 : 0, iso-C15 : 1G and iso-C15 : 1H. The predominant isoprenoid quinone was Q-8. The major polar lipids were phosphatidylethanolamine, phosphatidylglycerol, diphosphatidylglycerol, phosphatidylcholine, an unidentified phospholipid, an unidentified aminolipid and an unidentified lipid. The DNA G+C content was 45.3 mol%. The digital DNA-DNA hybridization value between strain FS0-4T and Lianibacter hongdougensis 6T was 5b5f913d15

1. Technical Field The present disclosure relates to a semiconductor device, a method of manufacturing the semiconductor device, and a semiconductor system. 2. Related Art JP-A-2011-231611 discloses a semiconductor device including a capacitor, which is disposed adjacent to a wiring pattern, such as a gate line or a word line, and which includes a capacitor insulating layer and a lower electrode. In this semiconductor device, an edge of a boundary region of the capacitor is disposed in the vicinity of a boundary region of the wiring pattern in an area where the wiring pattern and the capacitor overlap each other. Further, in this semiconductor device, a recess portion is formed in the boundary region of the wiring pattern, and an insulating layer is formed on an inner wall of the recess portion. In the semiconductor device of JP-A-2011-231611, however, the recess portion is formed in the boundary region of the wiring pattern, which may increase an electric field applied to the wiring pattern. The present disclosure has been made in view of the foregoing points and provides a semiconductor device, a method of manufacturing the semiconductor device, and a semiconductor system in which an electric field applied to a wiring pattern can be reduced.

Q: Rendering vertices in the same color in a loop In this example, the vertex vertices[a][1] is the same color as vertices[a][2], vertices[a][3] and vertices[a][4]. How would I make it so that each vertex in the loop is only of one color? A: The reason why is because the loop is stepping through each row of the vertices array. In other words,

Autodesk Revit AutoCAD and Revit I'm looking forward to sharing how we're bringing this new release of AutoCAD and AutoCAD LT together with the groundbreaking 3D modeling capabilities of Revit. It's not the easiest release to talk about because we are really stepping into new territory. I'll have a deeper look at these new capabilities and how we're bringing them together. As we continue to evolve, we're learning about the differences between AutoCAD LT and AutoCAD, and what works and doesn't work with each. AutoCAD LT is designed
