Q: View all reports for a specific area I have a report that shows the last 100 activities in the employee area. I have multiple areas in my project. In each area I have my own reports. How can I change the filter in the report to show all the last 100 activities for a specific area? I guess it has something to do with the ActiveReports property. A: Use the ActiveReports property ActiveReports.ReportLocation. You can set this value at report level or for a specific report (if a report has multiple parameters).

Tuesday, December 11, 2009 jelly belly I didn't realize how big my belly got last week until this morning when I was trying to use my usual yoga pants. They were too small. I don't really wear pants below the midsection, so I was really shocked that my usual saggy pants were now too tight. I knew I wasn't due till February but I must have had the jelly belly! In addition to trying on clothes and finding that they wouldn't fit, I found it hard to sleep last night. Maybe it's because I'm a virgin in all the areas I have my stomach and arms and legs. I just can't remember what it's like to be that way. I don't have a period yet, and I don't have a period for a week because I was having too much cramping. I guess this is normal. It seems like after the pregnancy, all the discomfort in my stomach really doesn't bother me anymore. I'm a little worried about all this because I'm not due for another three weeks and I feel like my stomach has the same size as it did when I was pregnant with Leah. At the same time, I feel better about my body and the weight gain than I did when I was pregnant with Leah. I feel stronger, my movements are smoother
