AutoCAD Extensions AutoCAD Extensions are a product available from Autodesk that can extend the functionality of the AutoCAD product. AutoCAD Extensions are also distributed as stand-alone applications and as plugin applications. All AutoCAD Extensions are third-party applications and can be installed on top of the core AutoCAD product or independent of the core product. Many of these extensions are free and some require registration. However, some extensions are offered only by Autodesk and cost money to use. Autodesk's own design applications, including 3D Fusion, allow the integration of third-party extensions. In addition, other third-party extensions are available for both AutoCAD and AutoCAD LT (see related articles below). Extensions can be installed from within the software or through the Autodesk Exchange Store. A small number of extensions are provided by Autodesk for free and are offered to users of AutoCAD LT or AutoCAD for training purposes. There is also a comprehensive set of tutorials available in the 'Help' menu. The full list of AutoCAD Extensions can be found in the online help. When a user goes to a page, I want to make an external ajax call to an API server with Nuxt.js. How would I go about making this call from a helper function? The idea is that the helper function can be accessed in the data context of a component, but only as late as the component is mounted. A: You can create a function with the Axios component like this: export default function actions() { return { makeCall() { Axios.get(/* any configuration here */) .then(result => { /* handle success */ }) .catch(error => { /* handle error */ }); } } } Then, you can use it as follows: {{ item.text }} export default { data() { return { items: [] }; }, created() { this.makeCall(); } };

Incredibly easy and efficient tool to highlight and point out mistakes in your drawings, right on-screen. With Markup Assist, change the appearance of your drawing with text and line highlights. (video: 11:50 min.) Refine curves, arcs and splines, with greater precision, even when the lines are rough. Using the new Map Spline Viewer, you can zoom into your drawing without the sketchlines, and make better, more precise changes. (video: 2:27 min.) AutoCAD can automatically place points on top of the splines (or other profile shapes), and update the spline path to incorporate the new points. Automatically place, smooth and adjust spline curves in a few simple steps. (video: 1:00 min.) AutoCAD now includes a Dynamic Input Monitor that displays the last coordinates entered in the drawing, including the last-used point or object to which they've been associated. (video: 1:11 min.) Create and edit the data from your models. Keep your data organized, and share your models with others. (video: 1:30 min.) Edit and share CAD models in both 2D and 3D, in any program, including 3dsMax, SketchUp, Inventor and Solidworks. Set a preferred CAD file format, or a format that retains the geometry and datatype. Make your work accessible and sharable across tools and applications. (video: 4:36 min.) Keyframe-based animation has never been so easy.
