1.12.0Cadence of Carnage Cadence of Carnage is a thrash metal band from Tonawanda, New York. Formed in 1996, the band's lyrical and musical style is said to be influenced by the early works of Death metal band Slayer. The band has toured North America, Europe, and Australia. History Cadence of Carnage began as a death metal band. Their debut album Sound of the Dead was recorded in 1998, produced by Floodgate Records' head Mark Eglinton and released in 1999. A feature of this album was the song "Yea, Though I Walk Through the Valley of the Shadow of Death", with a similar vocal/lyrical style to Metallica's "Wherever I May Roam". In 2001, the band released their second full-length album, Join the Undead. The album was once again produced by Eglinton, and once again featured the song "Yea, Though I Walk through the Valley of the Shadow of Death". This song has not been played live since, and was possibly removed from the band's setlists due to the infamous lyric. Also on this release was the song "This Is the End", a track that would later be retitled "Bury Me in a Rut" for their third full length. From 2003 to 2004, Cadence of Carnage went on a hiatus. In 2004, the band released their third full-length album, titled Omens of the Black. This album found the band moving away from heavy death metal to a thrash metal sound. Along with the song "Sabbath Reigns Forever", this album would also feature the song "Final Days" which would later be reworked into the song "Bury Me in a Rut", also used on Omens of the Black. That same year saw the release of the third release for the band, a split with the St. Vitus titled "Black Out" which featured the short songs "Depressive Mourning" and "The Pursuit of Black". In 2006, Cadence of Carnage returned with their fourth full-length

I have the following directory structure: /admin /admin/admins /admin/admins/amy /admin/admins/amy/profile /admin/admins/amy/profile/email /admin/admins/amy/profile/friends I want to recursively extract and store email addresses from friends (all subfolders) in a list. My current code: import os import string import re import sys root\_dir = "/Users/Uvener/PycharmProjects/\_test/tuple\_test/" emails = [] def getEmails(): for root, subFolders, files in os.walk(root\_dir): for fileName in files: if fileName.endswith(".txt"): email = re.search("\w+@[a-z0-9\-\-]+\.[a-z0-9\-\-]+", fileName) emails.append(email) getEmails() I know the code is not perfect and it doesn't work, but its a start. How can I reformulate the getEmails() method to work? A: The following code works just fine for me, but I don't know why yours does not. # -\*- coding: utf-8 -\*- # import site from os.path import exists from os.path
