Kwik Browsa [Win/Mac] [March-2022]

Kwika Browsa is a compact, free web browser with simple and easy-to-use interface. You can open a new web page in a new window (if you have enough free RAM memory) or simply click a button to open a new page. Other operations are also easy to manage. You can select multiple URLs and open them in a new tab or window. If you want to, you can also use the Favorites List to save a webpage and insert it later to a browser session whenever you want. Kwika Browsa is completely free and ad-supported. The first feature of Kwika Browsa is that you can open as many tabs or windows as you like. Each window can be completely closed and won't take more space on your computer. If you don't like this feature, you can disable it and use a window instead. With that in mind, you will never have to close a webpage that you're currently reading. You can also setup various shortcuts for the webpages. For example, when you open www.facebook.com, you can select the option to open it in a new window or tab automatically. However, Kwika Browsa is missing several other features that other powerful web browsers have. Those features include the option to: Browse in Private Mode, Use Forms to create Email Templates, Add Webpage Links to NetLoader, View Source Codes, Cut, Copy and Paste Data. Kwika Browsa also lacks browser extensions that are a feature offered by other popular browsers. But if you are looking for something simple and free, this tool is probably the best one. What is Kwika Browsa? Kwik Browsa is a web browser. It is a window based application, and is available in Portable (WP) and Installer (EXE) versions. What is the default homepage for Kwika Browsa?
