How to change Windows themes in Photoshop Elements Photoshop Elements comes with many built-in window themes to help you create professional looking images quickly and easily. In this guide we will see how to change window themes in Photoshop Elements to your liking. So let's start... Open Photoshop Elements, go to File > Open, and then choose the folder with your image files. In the next step, select your photo, and then go to Image > Image Size. You will see different options to resize your image. Now, you can change the look of your photo by using the different customization options. First, choose one of the predefined options, which will automatically set its own size. For example, if you want to resize the picture to 100% of the viewport, select "Set Size to 100%" from the viewport and then go to Image > Image Size. If you want to change the whole picture, go to Image > Image Size > Preset for Landscape. In this image, we will use the preset option, where you need to select the "Set Size to portrait or landscape" option, and adjust the picture accordingly. If you need more options, you can also edit your own size with the control icons. These are shown in the following image. In the left-hand corner of the control panel, you can see the size icon. With this icon, you can click once to make the size smaller or twice to make the size larger. Also, with the control icons at the bottom, you can zoom in and out, change the image quality, as well as select the different presets. The Control icon allows you to zoom in and out. You can now place these controls anywhere you want, as long as it is on the viewport. If you want to zoom in more, simply click the zooming icon. The second icon, the previewing icon, allows you to navigate through your images one by one and to edit them on the screen. With this icon you can switch between the different views, such as the image view, the photo view or the canvas view. The following image shows these different view options.
