Systemic sclerosis (SSc) is a heterogeneous disease characterized by an autoinflammatory process that leads to fibrosis of the skin and internal organs. In SSc, lung involvement is one of the most serious complications. Previous data suggest an interplay between the immune system and the inflammatory cytokines involved in immunological disorders. The aim of the study was to investigate whether the genetic variability of the interleukin-1 (IL-1), interleukin-6 (IL-6) and tumor necrosis factor (TNF-alpha) genes is linked to the development of interstitial lung disease (ILD) in SSc. A total of 82 SSc patients (34 with ILD) and 127 healthy controls (HCs) were included in the study. The genotypes of the IL-1A, IL-1B, IL-6 and TNF-alpha genes were analyzed using a custom-designed TaqMan Allelic Discrimination assay. Patients with ILD had a higher frequency of the IL-1B*1/*2 genotype [28.8 vs. 13.6%, p = 0.028] than did SSc patients without ILD. The IL-1B*2/*2 genotype was associated with ILD with an odds ratio (OR) of 3.2 (95% confidence interval (95% CI), 1.31-8.21, p = 0.009). The AA genotype of TNF-alpha was associated with a lower risk of ILD [OR = 0.4 (95% CI, 0.13-0.78), p = 0.004]. In multivariate analyses, the IL-1B*2 allele and the TNF-alpha AA allele were associated with ILD independently of the other variables (p = 0.007 and p = 0.002, respectively). In conclusion, the IL-1B*2 allele was associated with ILD in SSc, and this could be an independent risk factor for ILD in SSc. There�

Typically, the vacuum cleaner is plugged into a receptacle of a wall mounted electrical outlet. An electrical power cord connects the outlet to the motor of the vacuum cleaner. The vacuum cleaner is also typically provided with various controls which enable the vacuum cleaner to be operated in a variety of different modes. Vacuum cleaners are often provided with a trigger switch. The trigger switch is normally disposed within easy reach of the user when the vacuum cleaner is in use. The trigger switch provides a convenient handle for controlling the speed of the motor of the vacuum cleaner. In some vacuum cleaners, the trigger switch is also used as a "dirt cup" switch. In this mode, actuation of the trigger switch causes the vacuum cleaner motor to turn on, thereby causing a dirt container on the vacuum cleaner to begin being filled with dirt. The dirt container may be an attachment which is removably mounted on a dirt cup and which is configured to receive dirt blown off the floor by the vacuum cleaner. The dirt container may be mounted on the vacuum cleaner by a trigger-operated vacuum cleaner attachment tool. Vacuum cleaners are often subject to various weather related conditions such as rain, sleet, snow, etc. The use of vacuum cleaners during weather related conditions is often inconvenient and can be dangerous to the vacuum cleaner user.
