that also has some javascript that loads some ajax content. I'm getting an error from selenium that it is timing out. Does anyone know how to wait for this to complete? Also, when I'm using Thread.sleep, does that cause issues with other threads on the system? I see that we are using multiple threads in the selenium driver, so is there a way to let my test know which thread I want to sleep? Right now, I'm just using Thread.sleep(5000), but I don't know if that will cause problems. Thanks in advance. A: There a1d647c40b
