
MasterPlex Crack + Keygen [Mac/Win] [Updated] 2022

MasterPlex helps automate ELISA data analysis by providing a fast and accurate way to perform data analysis. With MasterPlex you will not have to waste valuable time searching for the data for the various curves you are performing calculations on. By performing all your calculations automatically, all your data is saved, and if necessary it can be exported as a figure for you to view your results more easily. MasterPlex: - Automatically detects curve data: ELISA, Dose Response, Time course - Automatically saves data: ELISA data, ELISA Time-course data, Dose-response data - ELISA data analysis includes: - Calculate ELISA EC50 and IC50 values - Plot ELISA data with 4 or 5 parameter Logistic (4-PL and 5-PL) model equations - Carry out 4 Parameter Logistic (4-PL) and 5 Parameter Logistic (5-PL) analysis - Carry out Dose Response Curve - Carry out Time-course - Calculate sigmoidicity (s) - Can export data to various formats, including: - .png, .eps, .svg, .pdf - Support all features of Excel such as conditional formatting - Graphics - Raw data - Can import raw data from Excel files - Equivalent Excel functions such as =IF() can be used to run calculations - Can export the data and graphs into .png, .eps and .svg format - Includes automatic background correction - Includes automatic background subtraction - Provides automatic baseline correction - Automatically calculates the area under the curve (AUC) - Option to normalize the data - Option to carry out EC50 and IC50 calculations - Support for 4-parameter Logistic (4-PL) and 5-parameter Logistic (5-PL) model equations - Automatic Curves Display. 4 Parameter Logistic (4-PL) and 5 Parameter Logistic (5-PL) - Ability to export the curves to a .png, .eps or .svg file format - Ability to export the raw data in .csv format - Ability to import raw data from Excel files - Ability to save all raw data to an Excel file - Ability to save all graphs to an Excel file - Ability to save the data to an Excel file - Ability to save all data to a .csv file - Ability to save the data to a .csv

What's New in the?

The Curves are generated using the graph of the results. Notes: There is a Demo file in the download folder in order for you to try this program. The demo file can be used as a stand alone program or you can use the demos file to test and debug the use of the program. -It is extremely important that the instrument from which the samples are taken be correctly calibrated before starting a curve fitting process. -Graphs generated by the program may vary depending on the instrument that is used. The following additional information about the program may be useful. -The button "refresh curves" will reset the instrument to its default settings. -The button "autosave curve" will save the current Curves graph before exiting the program. -There is a button to insert a curve graph. To install the current version of the program, follow the following steps: 1. Run the download file. 2. Run the program. 3. Click on "Install", then "Install Now". 4. Wait until the installation is completed. 5. Click on "Done" to close the installer window. To uninstall the program, follow the following steps: 1. Run the download file. 2. Run the program. 3. Click on "Uninstall". 4. Click on "Uninstall" again. 5. Wait until the uninstallation is completed. 6. Click on "Done" to close the uninstaller window. Note: The following is a brief explanation of the different models that the program has been designed to support. The software has been designed for use with Luminex, Bio-Plex and VIDAS instruments. Currently, the program supports 4 Parameter Logistic (4-PL) and 5 Parameter Logistic (5-PL) model equations and automatic EC50 & IC50 calculations for Dose Response Curves. For example, if the 4PL model is selected, then the software will calculate EC50 values for the 4PL model. If you are using Bio-Plex instruments, then you may be interested in finding out more about the 5 Parameter Logistic (5-PL) model equations that are used with Bio-Plex instruments. If you are using Luminex instruments, then you may be interested in finding out more about the 4 Parameter Logistic (4-PL) model equations that are used with Luminex instruments. There is a link to the software manual on the following website:

System Requirements:

Hard-disk space: 400 MB 800 MB 1 GB 2 GB 4 GB 8 GB RAM: 512 MB Processor: Intel Pentium 4 2.4GHz (3.2 GHz recommended) or better DirectX: 9.0 Network: Broadband internet connection HDD: 10 GB 20 GB 40 GB 80 GB 160 GB
