Currently, there is no standard means for programmers to develop and install third-party applications for AutoCAD. Other software applications that can

interact with AutoCAD include: Eclipse ObjectARX, a C++ class library SPIRIT, a freeware text processing tool Xstream

Xstream is a tool by Autodesk which allows its customer's to connect to the remote AutoCAD design center and work on drawings and settings. It is not the same as the streaming as the remote client sees the same screen as if they were at the workstation. The streaming may be limited by the remote computing model chosen, although the user can see the current drawing at the remote client, they can only interact with the AutoCAD application and not the "remote"

application. Xstream is not a fully integrated application and is not part of the original AutoCAD software package.

Reading Companies A growing number

of Americans are turning to the Web for entertainment and information, according to a study released Thursday by ABI Research. The research firm said that online access to electronic books will grow 10 percent this year, from 40 million electronic books sold in 2001 to more than 50 million in 2002. For many people, the Internet is a playground. The sites they visit are sometimes troubling and occasionally maddening. But for those who want to find good things, the Internet offers a powerful tool. One day last week I joined some of the most respected computer scientists in the

country to show how easy it is to find Web sites that encourage good and help organizations that work for important causes. For the first time, more than half the adults in the United States have used the Internet, according to a recent Harris Interactive survey. Harris' survey found that 56% of adults have used the Internet in the past six months, compared with 54% last year. Among online users, the number who have used the Web for more than six months jumped from 47% to 58%. The Government Accountability Office has scheduled a hearing on computer

security for Nov. 5. The hearing will take place before the Government Management, Information Technology and Security Committee of the House of Representatives. On Jan. 9, the GAO will report on the hearing. It's not clear what issues will be addressed. The GAO is the investigative arm of Congress. The first results from a three-year study of computer security policies at U.S. corporations were released Wednesday by the Government Accountability Office. Nearly 30% of the 350 companies surveyed have no computer security program at all. Of those that have a

program, two-thirds of the companies said it did not meet the minimum standards set out in a government report. It is almost a cliché in the computer business these days: The buyer wins when suppliers work together. When the federal government went shopping for computer systems in the late 1990s, it demanded not only better performance, but

or annotations to files, generate metadata (libraries, databases, and tags), and see exactly who and what is associated with each file. Infographics: Add the numbers to your designs with mathematically precise plotting that integrates with the 3D workspace. Create optimized plots, such as 3D raytraced surfaces, or link 2D data to 3D models to automatically update their properties. Design better graphics, save time with interactive graphs, and export the results to multiple formats. Keyboard Shortcuts: Quickly access the most commonly used shortcuts and

commands from anywhere in the software. Add a keyboard shortcut to any command or item, for instant access. Freehand Drawing: Create, shape, and edit any object type using a freehand path. Use the pen tool, polyline tool, polyline snap tool, and more to draw freehand, and you can draw in any direction, on any shape, with any number of segments. Drafting: Assign a hierarchy to a group of objects for a visual and logical hierarchy. Reorder objects within a hierarchy with flexible grouping and out-of-order editing. Make edits, including rotation and scaling,

without affecting other parts of the drawing. Use the inline editing tools to insert and manipulate objects in real-time. File Explorer: Access more than 1,000 file formats with flexible filter, sort, and search functions. You can also search for items on a local or network drive. Use the color picker to change the color of items and select layers. Export to XPS: Easily convert AutoCAD drawings to a.xps file for online sharing. Insert images, place PDFs, and merge and clean layers and commands. You can edit the layout of the XPS file before sending. XML Import: Import and export

data from nearly any XML format. With the right file format, you can import and link data from files such as AutoCAD Civil 3D, Navisworks, MicroStation, and other CAD formats.
