## **What's new in Elden Ring:**

### **ABOUT DANGER OCEAN LTD**

**DANGER OCEAN Ltd. was founded in 2014 as a spin-off company of DANGER OCEAN Inc, the developer of Dark Souls.**

**Establishing this spin-off company was a challenging decision for the DANGER OCEAN Inc. because it meant letting go of one of its most important assets, the intellectual property "Dark Souls". By developing Dark Souls-branded games under the company name of DANGER OCEAN, we acquired the rights to develop new games with the popularity of Dark Souls.**

**Although DANGER OCEAN Inc. is now working hard to finally complete its goals for Dark Souls, we decided to undertake a new challenge on our own. We joined our friends at FromSoftware and made a deal, through which DANGER OCEAN Inc. shares our goal of creating a brand new fantasy action RPG that has never been experienced before.**

**We are announcing DANGER OCEAN Steam, an action role playing game featuring a brand new fantasy world and a dynamic online environment. We call on you, the DANGER OCEAN Steam community, to push forward with us in this new challenge.**

**DANGER OCEAN Steam: WORLD DISCOVERY. We're excited to be able to show you the world of DANGER OCEAN Steam and its events related to the development of our Steam version. We're currently designing the prologue content, which will be presented as a new character story event.**

**Although we've been working towards this, it is thanks to both DANGER OCEAN Inc. and FromSoftware that we're able to make our first full and complete announcement today. We are tremendously excited about sharing many new and amazing things with you all!**

Q: C#: Difference between and What is the difference between these two declarations? List myList1; ArrayList myList2; and int[] myIntArray; ArrayList myIntArray2; I just got an error using the first type with the following lines: NullReferenceException was unhandled Object reference not set to an instance of an object Object reference not set to an instance of an object on the lines:  
myList1.Add(100); myIntArray[0] = 100; A: ArrayList is an ArrayList. The says that you're using an element type that's the same as the type T. The. is a wildcard, so that you can say List without specifying the type. The, is a slice expression, which means "that's all the elements of myList that are of type int". ArrayList has a Count property that gives you the number of elements in the array you want to use, but slicing a single element out of that is an error. A: You first need to understand the difference between a List and an Array, you are also trying to use an array like a list so maybe read up on Arrays and Lists in the msdn. To answer your question, the ArrayList is actually a List with a sealed non-generic type constraint on it to say it must be exactly the same type as int. The ArrayList is using generic type parameters for the type T. The T tells the compiler what type of object is going to be stored in the list. This is only something that is used when you add an object to the list as otherwise you will get compile time errors if you try to add something that is not allowed. One thing you can do with ArrayList is simply list all
