component is a clock component that displays the current time, shows the time on the minute, hour, day, month, year and on-off functions. The clock can display the running time of a running process that was launched a

long time ago, can be set to automatically update every minute, hour, day, month and year and can display the current time right on the main menu screen. Besides, you can set up the time format. Limitations: □ 30 day evaluation GMSI.NET Time Component

Description: GMSI.NET Truck Component is a component designed to simulate a t-bar meter. Numbers "roll" for a realistic visual effect. The font, number of digits, colors, and title are user-definable. Besides, the component has the title, history data(records) and user options. Limitations: □ 30 day evaluation GMSI.NET Truck Component

Description: GMSI.NET Vibration component was designed to simulate an automobile's vibration system. Numbers "roll" for a realistic visual effect. The font, number of digits, colors, and reset button are user-definable. Double-buffering technology provides fast updates and continuous, jitter-free display.

Limitations: □ 30 day evaluation GMSI.NET Vibration Component Description: GMSI.NET Visual Clock is a clock component that displays the current time, shows the time on

the minute, hour, day, month, year and on-off
functions. b7e8fdf5c8

GMSI.NET Odometer Component

GMSI.NET Odometer Component will add an odometer to your website to provide an instantaneous visual representation of a number that will roll. The odometer can be redefined to any number of digits, decimal places, font, background color, and button colors. Odometer is an inexpensive way to enhance your look and feel, and allow users to calculate real, up-to-the-minute, mileage for your application or website. This component has no query logic, it only updates when called. Please refer to the demonstration file or the documentation for more details. (For customers in Australia, Ontario, Japan, the UK, or other countries outside of the United States, see the Add-on and International.htm page) GMSI.NET Odometer Component Version 1.1 * GMSI.NET Odometer Component has been updated to version 1.1. Please upgrade to the latest version. * Odometer has been extended to support user-defined number type and number of decimal places. *

Odometer has been extended to support transparency, both of the background and numbers. * Odometer can now be animated. * Odometer has been redesigned to be compatible with browser compatibility. IE 6+ is supported. * Animated odometer can now have animation quality from 1 to 8. * Support library has been optimized to provide better performance. * GMSI.NET Odometer Component is compatible with ASP.NET MVC. * Odometer has been translated to more than ten languages. * GMSI.NET Odometer Component is now extended to support Visual Studio Server. * GMSI.NET Odometer Component is now extended to support Interactive Server. * Code modification may be needed depending on application's programming language. * GMSI.NET Odometer Component does not require a DLL, which reduces system requirements, particularly when compared to the CGI variant. * GMSI.NET Odometer Component supports IE5.5+ and Firefox 2.x+ browsers. * Additional features to be released later. Documentation: To download the documentation, please visit the

Google Code website. A sample configuration file "i_odometer.xml" has been included and demonstrates usage of GMSI.NET Odometer Component. This file can be used as the template to change the configuration of the odometer. This

What's New In GMSI.NET Odometer Component?

Easy to use, force-feedback, odometer widget for ASP.NET. Lightweight, and simple to use. Include this widget in your application and receive updates to the current odometer value each time the user is connected to the Internet. Easy to use, feedback is smooth, and the numbers for the odometer "spin" for the realistic visual effect. Intuitive navigation, you can change the size, color, font, and position of the number without modifying the look of the control. Validated control, compatible with all ASP.NET Templates for themeing the control, allowing you to create a unique look for your application. Double-buffering: each time a number is updated, GMSI.NET refreshes the widget and all the other numbers are

updated as well, to ensure the effect is continuous and jitter-free. Driverless: no device driver, no direct connection between the host and device, no data transfer, and no possibility of DDOS attacks. Globalization: numbers are correctly converted to your own regional settings. No WMI, no DLL files, no installation. Compatible with all Windows operating systems and controls. Works with IE, Firefox, Opera, Safari, Chrome, etc. Supports ASP.NET and ASP.NET MVC. Saving and restoring the odometer value between web sessions, or opening and closing the web page. Measurement of mileage and distance. Determines the best method to find the location of the device on a map (google Maps or MapQuest). Characteristics: Simple and intuitive.
