You will find the key on the welcome screen of the Autocad: Dopamine (DA) is a major neurotransmitter in the brain, which has been implicated in a variety of diseases and conditions. For example, Parkinson's disease (PD) is a progressive neurodegenerative disease that is primarily characterized by bradykinesia and rigidity. It is estimated that over 4 million people suffer from PD, with over 2 million people suffering from an advanced form of the disease. Currently, PD can only be effectively treated through the use of drugs such as levodopa, dopamine receptor agonists, monoamine oxidase B (MAO-B) inhibitors, catechol-O-methyl transferase (COMT) inhibitors, and anticholinergics. Since PD is a condition that occurs over a long period of time, it is desirable to have available treatments

that can delay or halt the progression of the disease, or even have a symptomatic effect in the early stages of the disease. Accordingly, in recent years, a large body of research has been dedicated to the development of compounds that inhibit DA reuptake and thereby increase the level of DA in the synaptic cleft. An early example of a compound used in the treatment of PD is the commonly used drug levodopa. Unfortunately, therapeutic use of this compound is associated with an undesirable side effect called “on-off” fluctuations. Other examples of compounds that act as DA reuptake inhibitors are bupropion and d-amphetamine. Both bupropion and d-amphetamine are currently marketed as antidepressants. It is thought that d-amphetamine is effective because it inhibits the presynaptic reuptake of DA, resulting in a rise in extracellular levels of the neurotransmitter. While DA reuptake

inhibitors have shown great promise, currently available drugs have been found to have an unacceptable side effect profile at sufficiently high doses. In particular, these compounds often induce hyperlocomotion and thereby have a high potential for abuse. For example, bupropion has been shown to produce significant increases in the number of nose pokes into a food pellet in the rat as compared to control animals (see D. Blier, et al., *J. Neurosci.* 16(1):92-100 (1996)). It has also been shown that bupropion produces a significant increase in the number of self-administering lever presses for intravenous cocaine in a rat model (see C. K. van Zutphen

What's New In?

Camera Management and Camera Paths: Track objects in your drawings to create paths for cameras. Create camera paths

on objects like text or lines that keep drawing commands from becoming distracting and unmanageable. Save your camera paths as a guide that you can use to save time and resources. (video: 1:05 min.)

Face Recognition and Stitching: Seamlessly import images from your phone or tablet to create a complete presentation. Convert your drawings into presentations that you can hand off to clients or colleagues. (video: 1:15 min.)

Drafting Tools: Use drawing tools to simulate what an object would look like in real life. Add as many features as you want to the real-life object in your drawing, then connect the two objects together. (video: 1:06 min.)

Forms: Quickly identify forms for better control. Folding and bending is built into your CAD software. (video: 1:09 min.)

Layout Tools: Sync layouts from various CAD files or other CAD applications. Establish your preferences and save layouts for each

project and then share those with others. (video: 1:05 min.) Ribbon Editor: Easy to use, visually appealing, auto-updating ribbon. The ribbon displays only the commonly used features that you want to access. There's no need to know commands to create efficient workflows. (video: 1:07 min.) Motion Paths: Transform objects in your drawings with animated properties. Work with motion paths to make changes to the movement of an object. (video: 1:08 min.) Data Management: Import and export the data you need for your drawings. Import data from other CAD file formats like.DWG and.DXF and export data in formats like.CSV,.XML, and.DGN. Import and export file formats that you can use in your CAD programs. (video: 1:14 min.) Feedback and Compare: Import customer and employee feedback to your drawings. Compare objects side by side to view the differences. Automatically show the

differences in color to make it easy to spot changes. (video: 1:05 min.)

AutoSheet: Use AutoSheet to automatically share and update drawings from Microsoft Office. (video: 1:01 min.)
