EZ Mask Crack + [32|64bit] [April-2022]

EZ Mask is an application designed to quickly extract elements from a photo. The object to be extracted must be enclosed within a shape or a contour in the photo. This shape can be calculated manually or auto detected by the application. The user gets to start right away by drawing a rectangle over the object to be extracted. The rectangle will automatically be filled with the color of the skin of the model. Once the rectangle is filled, the user can start to brush the skin color away until there is only the black color of the background left. When the black color is brushed away, the application will calculate the optimal shape to extract the object and return the result to a background layer. When the user is satisfied with the result, the user can save it to a new document or keep it as is and move on to the next object to be extracted. Using these Shape Copies you can then use these duplicates as a mask for another photo. You can also add more shape copies with different colors to increase the cutting possibilities. EZ Mask Limitations: EZ Mask can currently be used on Adobe Photoshop and Adobe Photoshop Elements files. It will work on all the backgrounds/backgrounds of the application.
