Q: Linearizing the dynamics of the discrete-time second order system by means of a state variable change I'm trying to understand the way to transform the given discrete-time second order system \$\$ \left\{\begin{matrix} \Delta y = y\\ \Delta y = \\frac{1}{(y+1)^2} \end{matrix}\right. \$\$ into the form: \$\$ \left\{\begin{matrix} \Delta y = \\frac{y+1}{yy\\ \Delta y = \\frac{1}{(y+1)^2} \\$ MY first attempt was simply to divide the first equation by the second one, but I didn't obtain any result. Could you help me? A: When you write \$y\$ in the second system, you can replace \$y\$ with \$y+1\$: \$\$\Delta y = \\frac{1}{(y+1)^2}\$ \$\$ \Delta (y+1) = \\frac{y+2}{(y)}

I may just give out 6 people for now, and let them know in advance so they can organise if they need to. Anyway, as I mentioned over on the interest thread, I've put the remains of my blog in a new /forum/ category, and I have a do new and shiny section of the forums dedicated to it, at the bottom of this one, if you'd care to to visit. As for the old blog, there is the link to the new section of the forums dedicated at the new blog at the bottom of the interest thread. I have completely finished all of the posts (thank goodness!) except for the lars (header image posts and all), so all is well for now (and I've got a spare hour or so to go). I haven't yet started writing the links in, but if you click the links in the About then it will take you directly to the page you are referring to! So, there you go! Sorry for being so slouchy, but I was waiting for the iPhone to be able to turn here colours to their original effect before I finished writing all of my posts, so I'd prefer to stay in bed writing them all out.
