It is written in C, but can use many programming languages. It supports floats and complex values. It can be used with array objects in C++. OpenBLAS is a GNU project. Description OpenBLAS provides high-performance and highly optimized BLAS functions, usually including those found in BLAS, LAPACK and Intel Math Kernel Library, available for programming languages. Its developers say that it "offers a complete, portable, and optimized set of BLAS and LAPACK routines for multiple architectures, including x86 (32-bit and 64-bit), PowerPC (32-bit and 64-bit), ARM, MIPS and others." It also provides an API for C/C++ programs. The module includes a C library that provides BLAS routines and a C++ wrapper for OpenBLAS that is aimed at users needing to use the library in C++ programs. OpenBLAS offers some features that usually require additional licenses: It works for platforms and architectures that are not officially supported by the BLAS standard. For example, it is not officially supported on x86 with the SSE extensions in Windows and most Linux distributions have removed support for S
